

On the Subject of Steam Selector

Yeah, that's right. Everyone's favourite module just got a sequel.

On the module you see:

- A display with a question on it
- Three buttons pointing left, right and up
- A submit button (enter)

If you don't, you either:

- Clicked on the wrong manual :P
- Have a BSOD screen on the module. If this is the case, that means, you've started to game outside of Steam. Press the last line to solve the module.

You need to answer 3 questions, and the module will solve. If you get one wrong, the whole module resets.

Questions can be either one of the followings:

- Who is the Xth on the list of your Steam friends sorted by {sorting method}?
- From whom have you received your Xth last message on Steam?***
- What is the Xth letter/digit of the Yth last message you've received on Steam?***
- Who does this avatar belong to?*
- Have you unlocked the "{achievement name}" achievement?
- In/On which year/month/day have you unlocked the "{achievement name}" achievement?
- When have you unlocked the "{achievement name}" achievement? (hour/minute)
- How many friends do you have on Steam?
- Please select the avatar of {user}!

Sorting methods can be one of the following:

- Alphabetically (A-Z)
- Alphabetically (Z-A)
- Steam level (Low-High)
- Steam level (High-Low)

When sorting by Steam levels, sort the ties alphabetically (A-Z).

To select the answer, use the Left/Right buttons and press the Enter button to submit your choice.

When given a question, the button pointing upwards might start flashing. Clicking on it will reveal extra instructions about answering. Use the left/right buttons to cycle through the pages here.

**The module will show the avatar of the user. If multiple users have the same avatar, either can be used.*

***Will only be asked if you've received a message since starting the game. Emojis are represented as :{emoji name}: in the text.*
